

Dorchester Medium Security Penitentiary Expansion 1994

Installed (2) 5-ton DX-to-Water Heat Pumps

These two units preheat the incoming ventilation air and provide chilled water cooling in a 6000 ft. sq. section of the prison. Units maintain the temperature of the tank as per digital control from the building management system.

Both DX-to-Water and regular reversing Water-to-Water units have the same case size (26"w x 26"h x 32"l) and can easily be stacked in a mechanical room to reduce space.
